

THE FASTEST-GROWING DESKTOP OS

Own your computer *again.*

No subscriptions. No forced AI. No bloatware you never asked for. Just a fast, free operating system that does exactly what **you** tell it to, and nothing you didn't.

```
you@yourmachine:~$ sudo make-it-mine  
> ownership restored. welcome back
```

Your PC isn't obsolete. Your old OS just **gave up on it.**

Forced upgrades. Hardware declared "too old" overnight. Features turned into monthly fees. There's a calmer way to compute, and millions are already making the switch.

// WHAT YOU LEAVE BEHIND

Freedom from the stuff you never agreed to.

Modern operating systems keep adding things that serve them, not you.
Linux strips it back to what you actually own.

01

No subscriptions

Your office suite, photo editor and creative tools shouldn't bill you forever. Powerful open-source alternatives cost nothing, ever.

02

No forced AI

No assistant watching your screen, no features you can't turn off. If you want AI, you add it. If you don't, it's simply not there.

03

No bloatware

No pre-installed games, trials or ad-ware shipping on day one. You start clean and install only what you choose.

04

No forced installs

Updates happen on your schedule, not mid-presentation. Nothing reinstalls itself or reappears after you remove it.

05

No surveillance

No telemetry quietly phoning home. Open-source means anyone can verify exactly what your system does and doesn't send.

06

No planned obsolescence

Lightweight enough to make a ten-year-old laptop feel fast again. Keep your hardware as long as you want it.

// BUILT FOR HOW YOU ACTUALLY USE IT

One OS. Every kind of user.

Whatever you sit down to do, there's a thriving, free toolset waiting. No license keys required.

FOR / GAMERS

Game without compromise.

Your Steam library just works. Compatibility tooling now runs thousands of Windows titles natively, and handheld gaming PCs already ship on Linux.

Steam + Proton

Lutris

Low overhead

More FPS headroom

FOR / DEVELOPERS

The native home of code.

The terminal, package managers, containers and the entire open-source stack are first-class citizens, not an add-on layer bolted on after the fact.

Native shell

Docker

Any language

SSH-first

FOR / ARTISTS & CREATORS

Pro tools, zero rent.

Paint, model, edit and produce with mature open-source software, the kind people pay monthly for elsewhere, here free and yours forever.

Krita

Blender

GIMP

Inkscape

DaVinci Resolve

FOR / EVERYDAY USERS

It just gets out of the way.

Browse, write, video-call and stream on a system that boots fast, stays quiet and never nags. Familiar enough to feel like home on day one.

Fast boot

Browser-ready

No nagging

Free updates

// YOU'RE NOT SWITCHING ALONE

A quiet movement, growing loud.

+70%

Growth in desktop share over three years, and accelerating.

5%+

U.S. desktop share crossed for the first time in 2025.

100%

Of the world's 500 fastest supercomputers run Linux.

Gov'ts

Across Europe migrating public offices off proprietary software.

Figures reflect publicly reported desktop usage trends (StatCounter) and public-sector migrations across Germany, France & Denmark, 2024 to 2026.

// EASIER THAN YOU THINK

Try it today, keep all your files.

Run Linux from a USB stick first, with nothing installed and nothing erased.

Like it? Make it permanent in minutes. Pick the flavour that fits you:
